

TETEMESHA

MAGUGU

500SC

Pre & early-post emergence selective herbicide for the control of sedges, annual grass weeds & broad-leaved weeds in Maize crop

KEY BENEFITS:

- ✓ Greater Care for the Crops and the Land.
- ✓ Tough on weeds and gentle on the maize crop.
- ✓ TETEMESHA 500SC is Selective, Systemic, Foliar and Soil Acting.
- ✓ Provides critical early season weed control when the maize crop is most sensitive to annual grasses and broad-leaved weeds.

MODE OF ACTION:

Metolachlor is mainly taken through the shoots of germinating plants and seedlings. Atrazine can be taken up by the roots and leaves. Weeds are therefore killed before emergence or shortly after emergence. The unique formulation powered by research delivers a 4 times action that no other herbicide currently in the market can rival.

APPLICATION RATE:

Water Volume	Rate	Coverage Area
20L Knapsack	300mls	1/4 Acre
400L Boom Sprayer	6Litres	5 Acres=2Hactares
600L Boom Sprayer	9Litres	7.5 Acres=3Hactares
